                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PI468916. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a xhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cells (GibcoBRL). This library was constructed in the laboratory of Dr. Randy Shoemaker."

It currently consists of 5 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

compounds and methods for the treatment and diagnosis of chlam infection. The compounds provided include polypeptides and fus proteins comprising immunogenic portions of Chiamydia antigens and DNA sequences encoding such polypeptides. They are useful i vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infection

A of the leader sequence and a putative ligand-binding domain esp. antigenic region, of a protein is obtd. following inse of putative LBD-encoding DNA into the vector. The fusion paccumulates as inclusion bodies in Escherichia coli host ce can be screened for its ability to bind a ligand.

                                                                                                                     The present sequence is provided in a specification relating to compounds and methods for the treatment and dlagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It is used in a method for mapping the ligand binding domains (LBD), esp. antigenic regions, of a protein. Putative LBD-encoding DNA is inserted into the vector such that the LBD is expressed as a fusion to the T7 gene 10 leader (AAR87027). The fusion protein accumulates as inclusion bodies in Escherichia coli host cells and can be screened for its ability to

They are more effective immunogens than mixtures of the individual protein components.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This DNA sequence includes a coding region for a recombinant Mycobacterium tuberculosis tri-antigen fusion protein (see AAY32069), termed Mtb36f, composed of the antigens ERD14, DPV and MTI. The DNA is useful for the recombinant production of the fusion protein. Coding sequences for the antigens were modified by PCR in order to facilitate their fusion and subsequent expression of the fusion protein, and were then ligated to obtain the present polynucleotide. The invention provides fusion proteins (see AAY32059-71) containing at least 2 M. tuberculosis antigens. The new fusion proteins and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1077

The specification also describes putative GTP binding protein genes, putative phosphaticylinositol-4 kinase protein gene, and a putative cytokenesis gene. These genes are essential for fungal growth and development. The proteins can be used in methods to identify compounds that have fungicidal activity. Compounds with fungicidal activity can be used for suppressing fungal growth, especially of filamentous fungi. Fungi that can be suppressed include plant pathogens (e.g. Septoria tritici, Stagnospora nodorum, and

This sequence represents a Glutathione-S-Transferase (GST) protein cisolated from a soybean clone. The invention relates to isolated nucleic cated fragments (see AAA53393-A53406) which encode soybean GST C polypeptides (AAB03731-B03744). GSTs are a family of enzymes which catalyse the conjugation of glutathione, homoglutathione and other cultathione-like analogues, to a large range of hydrophobic, electrophilic compounds. GSTs have been implicated in the detoxification of certain harbicides. The GST nucleotide sequences are useful in the construction of herbicide-tolerant transgenic plants, plants that are construction of herbicide-tolerant transgenic plants, plants that are construction of herbicider of stresses, or plants in which the GST concleic acid fragments are also useful as probes for genetically and physically mapping the genes that they are part of, and as markers for traits linked to expression of the enzymes. This will be useful in plant hreading in order to always a construction of the integration of the construction                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Дb

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAB03744 standard; Protein; 237
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             xenoblotic compounds in plants and seeds. The GST polynucleotides and polypeptides are used for the production of herbicide-tolerant transgenic plants, and for the development of screening assays to identify GST inhibitors and substrates, which can be used as herbicide synergists. GST Gene specific probes can be used in gene identification methods. The recombinant GST enzymes can be used produce enzyme specific antibodies which are used to detect the

The invention includes vectors containing any of the DNA sequences, a drug containing any of the DNA sequences, and a cell transformed by the vector. The atopy genes can be used in the diagnosis and treatment of allergic diseases, atopic dermatitis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hybridisation assay; genetic mapping; gene expression protein identification; signal transduction pathway; metabolic pathway; promoter; termination sequence; ss.

RESULT 1	
AL391649/c	
LOCUS	AL391649 57329 bp DNA PRI 12-JAN-2001
DEFINITION	Human DNA sequence from clone RP11-202E10 on chromosome 9 Contains
	GSSs and STSs, complete sequence.
ACCESSION	AL391649
VERSION	AL391649.8 GI:11878445
KEYWORDS	HTG.
SOURCE	human.
ORGANISM	Homo sapiens
	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
	Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE	1 (bases 1 to 57329)
AUTHORS	Sehra, H.
TITLE	Direct Submission
JOURNAL	Submitted (04-JAN-2001) Sanger Centre, Hinxton, Cambridgeshire,
	CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
	requests: clonerequest@sanger.ac.uk
COMMENT	On Dec 18, 2000 this sequence version replaced gi:11876078.
	During sequence assembly data is compared from overlapping clones.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. The following abbreviations are used to associate primary accession
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems such as compressions and repeats, but not necessarily within known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RP11-202E10 is from the library RPCI-11.1 constructed by the group of Pleter de Jong.
